

Forecast and Value Delivered

Prepared for Samuel White (CEO) and Prof. Philippe Wilson (Executive Chairman) · review 1 June 2026 · covering the engagement since Programme Start, 8 April 2026

In eight weeks BridgePoint has given HH a single sharp proposition, a rebuilt and active presence, and a named pipeline of 16+ engagements across six territories. Part One is the forward look: it puts indicative values, probabilities and timings against that pipeline, names the people behind the numbers and sets out exactly what we are asking of each of them. Part Two is the evidence base behind it: what HH had on 8 April, what it has now, and how each contracted workstream and clause has been met. The numbers in Part One are planning targets built from market comparables, not commitments or guarantees.

PART ONE

Phase 2: forecast and targets

The build phase produced a named pipeline. This half puts indicative values, probabilities and timings against it and brings the key people to life with a specific ask against each.

How to read the figures. Each value is a range, Low / Base / High, anchored to published comparables (public grant and contract awards, sector deal data, procurement benchmarks; sources held on file). Probability is our judgement of conversion within the stated window. **Weighted value = Base × probability**, the prudent planning number. Three things are kept separate so nothing is double counted: **(1) services revenue** HH could invoice, **(2) capital and strategic events** such as investment, licensing or acquisition, which are balance-sheet not revenue, and **(3) connector value**, the pipeline a relationship can generate rather than revenue in its own right. All figures are GBP and exclude VAT.

1. Services revenue pipeline

Engagements that would result in HH invoicing for diagnostics, laboratory, CRO or evidence work. Weighted total is the prudent forecast; the Base column is the unweighted ambition if each converts.

ENGAGEMENT	SCOPE AND BASIS	LOW	BASE	HIGH	PROB.	WEIGHTED	WINDOW
------------	-----------------	-----	------	------	-------	----------	--------

Hysteron · pilot <i>UK, women's health</i>	Diagnostic discovery-to-pilot. Anchored to SBRI women's-health feasibility awards (£77k to £100k).	£50k	£95k	£150k	60%	£57k	Sign Jul 2026
Hysteron · panel	Multi-marker panel development and clinical validation, the expansion after a successful pilot.	£200k	£450k	£900k	30%	£135k	2027
ALS Life Sciences <i>Europe</i>	Reactivation of primary diagnostics delivery partner; ISO 17025/15189 and wet-lab gap. Reactivation deck already at £300k+. Sam-led warm reintroduction to Josue now live.	£150k	£300k	£600k	45%	£135k	Q4 2026
ALS Invitek <i>EU, Berlin</i>	Molecular arm; proposal v0.3. Biomarker / assay work package.	£80k	£150k	£350k	30%	£45k	H1 2027
Eurofins · supply <i>via Sara / Garry Walsh</i>	First specialist subcontract or referral work (e.g. Awaab's-Law mould genomics, multiplex panels) once HH passes supplier qualification.	£150k	£300k	£1.0m	25%	£75k	2027
Al Maktoum · Camel Science <i>UAE</i>	Camel-health analytical services / QC contract following requirements scoping. Niche; benchmarked to	£50k	£150k	£500k	35%	£53k	Scope Dec 2026

specialist
veterinary-lab
work.

Saudi entry <i>via ThakaaMed JV</i>	First framework / JV diagnostics services. NUPCO benchmark; BGI–Genalive (£103m / 3yr) is the scale ceiling, heavily discounted for a first UK entrant. Needs a local JV (40% localisation rule).	£500k	£1.5m	£5.0m	15%	£225k	2027+
HeartSights <i>UK, inbound</i>	Advisory role under discussion; inbound via the new site. Advisory fee now, possible diagnostic work later.	£15k	£40k	£80k	50%	£20k	Q3 2026
Weighted services forecast	Prudent planning number across the eight lines	—	£2.99m	£8.58m	—	£745k	~18 mo

Construction / preventive-materials lines (OptimaBI, TrueLens), Lohmann, Stoma Alert and the legal / RSL sector (deliberately held pending the contractual restriction) are excluded from the weighting until scoped, to keep the forecast conservative.

2. Capital and strategic events

Investment, licensing and acquisition outcomes. These sit on the balance sheet or the cap table, not in the revenue forecast above, and are shown as optionality the pipeline creates.

EVENT	BASIS	LOW	BASE	HIGH	WINDOW
Kate Ireland · angel <i>into IP and/or HH</i>	UK angel / HNW ticket into patent-pending diagnostics (ArrayDx, PatchDx). SEIS/EIS-eligible if entity is clean. A validation dataset roughly doubles the defensible figure.	£150k	£350k	£1.0m	Term sheet Q4 2026

Al Maktoum family office · equity	Gulf family-office seed / growth ticket into a health venture. Published ticket floors £0.8m+; diagnostics skews to the lower band.	£0.8m	£3.0m	£8.0m	2027
Camel IP licence <i>UAE / Saudi entity</i>	Technology licence + royalty for a camel-health diagnostic platform. Structured on the NGeneBio–Euro Alliance model (£2.8m + 10yr royalty).	£0.5m	£2.0m	£8.0m	2027
Eurofins · acquisition <i>exit optionality</i>	Bolt-on of HH as an operating lab + validated IP. Eurofins pays ~1.5x revenue for commodity labs, ~3.5x for specialist genetics (Emory). Needs ~£2.5m+ revenue and a validated panel; high case needs CE/UKCA marking.	£3m	£8m–15m	£20m–50m	2–3 yr

The UAE / Saudi camel axis is the single biggest prize, and the four names Mark identified are the route to it. ThakaaMed (in-region delivery and regulatory cover) plus the Al Maktoum office and Camel Science (the camel-health work and capital) plus Garry Walsh (Gulf pharma access) plus Kate Ireland (UK capital to fund the entry) form one connected play: a UAE camel-analytical pilot, an in-region partner to hold approvals, and a Saudi JV to reach NUPCO-scale contracts. The sequencing matters more than any single deal.

3. Connectors: the pipeline multipliers

These relationships are valued by the pipeline they introduce, not by revenue of their own. They feed the tables above, so their value is shown as opportunity generated to avoid double counting. Section 4 takes each of them, and the people inside the deals, and sets out exactly what we are asking.

CONNECTOR	ROLE AND REACH	12-MO OPPORTUNITY	PUSH
Sara Macauley <i>Global Scot</i>	Already surfacing Eurofins and Saudi pharmaceuticals. Senior connector archetype.	£1.5m–3m	Workshop → 2 qualified intros by Aug 2026
John Moore · CardioNexus <i>Australia</i>	Ex Global Director of Innovation, Bupa. Payor and network access, fast-lead potential. High-value archetype.	£3m–8m	Structured intro plan, first 3 leads by Sep 2026

Andrew Roddam <i>UK / US</i>	Lead source through his network; formal partner-and-advisor plan to follow.	£1.5m–3m	Advisor plan signed Jun 2026; first intros Jul 2026
Garry Walsh <i>Global / Gulf</i>	Gulf pharma access and the Eurofins / Etienne Roux conversation.	part of Gulf axis	Gulf pharma intro calls by Jul 2026
Neil · Brown Rudnick <i>UK / via Philippe</i>	Tech Partner at Brown Rudnick; long-standing HH legal relationship and a prolific opportunity-feeder into a high-profile client base.	£300k+ precedent	Attend BR Summer Party 18 Jun 2026; reactivate Neil as referral source
Dace Dimza-Jones <i>Office for Investment</i>	Government Dealmaker (Office for Investment / Global Entrepreneur Programme); access to investor networks, inward-investment facilitation and government-backed support.	gov-backed access	Connect/reconnect call 25 Jun 2026; scope OfI / GEP support and intros

Finder / success-fee norm for commercial introductions is 5 to 15 per cent of first-year contract value; investor-introduction fees must be structured carefully for FCA reasons. Advisor relationships are typically cash retainer plus 0.3 to 1.0 per cent equity. To be set per relationship.

4. The people behind the forecast: who we are engaging, what we are asking

A forecast is only as good as the conversations underneath it. The cards below take the names that matter most over the next two quarters and make each one concrete: who they are, what we want from the relationship, and the specific thing we are asking them for next. This is the conversion work behind the forecast.

Kate Ireland

CAPITAL

UK angel / HNW investor · warm to HH

A prospective investor with appetite for the patent-pending diagnostics estate (ArrayDx, PatchDx) and, potentially, directly into HH. The first named source of UK capital to fund the international push, and SEIS/EIS-eligible if the entity is clean.

WHAT WE WANT

A £150k–£350k ticket, structured either into a clean IP/SPV around ArrayDx and PatchDx or directly into HH, with a path to follow-on as validation data lands.

WHAT WE ARE ASKING HER

A structured first investment conversation: whether she comes in at IP level or HoldCo level, what she needs to see, and to anchor against the validation-dataset milestone that roughly doubles the defensible valuation.

Next move — Q3 2026: investor session held and entry point agreed. Target a term sheet in Q4 2026.

Andrew Roddam

ADVISOR & LEAD SOURCE

Ex-Biocentre board · drug-development and corporate-financing background

Already shaping HH's strategy. On 19 May he gave the discipline the company most needed: pick one opportunity, push hard for three months, build a per-opportunity business case before pipeline, and choose capital structure per opportunity. He offered to review the business plan and to run a Biocentre-style whiteboard session once the foundations are in place.

WHAT WE WANT

A formal advisor relationship (cash retainer plus 0.3–1.0% equity), his whiteboard session on the CRO sub-niche choice, and warm introductions through his pharma, CRO and corporate-finance network.

WHAT WE ARE ASKING HIM

To agree and sign the partner-and-advisor plan, to open his first introductions, and to reconvene the whiteboard once the per-opportunity business cases (Awaab's Law, CRO, multiplex) are drafted.

Next move — Jun 2026: advisor plan agreed and signed. Jul 2026: first introductions live.

Sara Macauley

CONNECTOR

Global Scot · senior international connector

Already earning her place: surfacing Eurofins and Saudi-pharmaceutical leads before any formal arrangement. The fastest route into the Gulf-pharma and Eurofins conversations that anchor the forecast.

WHAT WE WANT

Two qualified introductions out of the scheduled workshop, specifically into Gulf pharma and the Eurofins / Etienne Roux conversation, plus an agreed target list to work against.

WHAT WE ARE ASKING HER

To run the workshop, agree the priority targets, and commit to two warm intros on a finder basis. Terms (5–15% of first-year value) to be set before the intros are made.

Next move — workshop converted to two qualified introductions by Aug 2026.

John Moore

CONNECTOR

CardioNexus, Melbourne · ex Global Director of Innovation, Bupa

Payor-side and network reach across Australia and Asia-Pacific, with fast-lead potential. The highest-value connector archetype in the pipeline (£3m–8m of 12-month opportunity), currently warm but unstructured.

WHAT WE WANT

A structured introduction plan into his payor and innovation networks, and the first three named leads opened, with HH's translational-diagnostics proposition positioned for the Australian and Asia-Pacific market.

WHAT WE ARE ASKING HIM

To agree the intro plan, identify the first three targets, and tell us what HH needs to put in front of each to be credible to a payor audience.

Next move — intro plan agreed; first three leads opened by Sep 2026.

Garry Walsh

GULF ACCESS

Gulf pharma conduit · Eurofins / Etienne Roux conversation

The practical key to the Gulf-pharma access and the Eurofins partner/acquirer conversation, reached through the Sara Macauley network. A linchpin in the camel-axis sequencing.

WHAT WE WANT

Introduction calls into Gulf pharma, and to open the Eurofins supplier-qualification and Etienne Roux relationship that underpins both the supply-revenue line and the longer-term acquisition optionality.

WHAT WE ARE ASKING HIM

To set up and host the first Gulf-pharma intro calls, and to broker the Etienne Roux conversation at Eurofins.

Next move — Gulf-pharma and Eurofins (Etienne Roux) intro calls held by Jul 2026.

Neil · Brown Rudnick

CONNECTOR · 18 JUN

Tech Partner, Brown Rudnick · long-standing HH relationship, reconnected via Philippe

Brown Rudnick has acted for HH for years. Neil, their Tech Partner, is a prolific opportunity-feeder into a very high-profile client base. This channel has form: a previous Brown Rudnick summer party unlocked a £300k medical-device contract for HH. The next party is on 18 June 2026, and Philippe has offered to make the reintroduction. The nearest-term, lowest-friction opportunity in the whole forecast.

WHAT WE WANT

To reactivate Brown Rudnick as a live referral channel, with Neil feeding near-term opportunities from his client base — the kind that produced the £300k medical-device contract last time — and a warm, senior-level relationship into a high-profile network.

WHAT WE ARE ASKING

Mark to attend the summer party on behalf of HH; Philippe to brief Neil ahead of it; and a follow-up conversation set with Neil to turn the reconnection into a steady opportunity feed rather than a one-off.

Next move — 18 Jun 2026: attend the Brown Rudnick Summer Party; Philippe to introduce Mark to Neil ahead of the event.

Dace Dimza-Jones

CONNECTOR · 25 JUN

Dealmaker, Office for Investment · Global Talent / Global Entrepreneur Programme

The Office for Investment is the UK government's high-value investment arm (jointly No.10 and the Department for Business and Trade). Its Dealmakers open doors to investors, corporate partners and government-backed support. For HH this is a credibility-and-connections channel directly relevant to the capital raise and the international expansion: a route to inward-investment facilitation and investor introductions, with the weight of UK government behind it. The 25 June session is a connect-and-reconnect for several of the HH team, building on an existing relationship with the Office for Investment.

WHAT WE WANT

Government-backed validation and connections for HH's growth: access to the Dealmaker investor network, inward-investment facilitation (directly relevant to the Gulf / family-office capital), and any Office for Investment or Global Entrepreneur Programme support HH or its founders qualify for.

WHAT WE ARE ASKING

On the call, to re-establish the relationship across the team, confirm what OfI / GEP support and introductions HH is eligible for, and identify where the Dealmaker network can accelerate the capital raise and the international-expansion plan.

Next move — 25 Jun 2026: connect/reconnect call with several of the HH team; qualify the support available and the highest-value introductions, and agree next steps.

Verity Fotheringham

LIVE REVENUE

Hysteron · UK women's health

The nearest-term cash in the pipeline and the highest-probability line in the forecast (60%). Discovery has moved to a scoped pilot, with a multi-marker panel expansion behind it.

WHAT WE WANT

The pilot proposal signed, then the panel-development and clinical-validation expansion that follows a successful pilot.

WHAT WE ARE ASKING HER

To countersign the pilot proposal on the scoped terms, confirm the expansion panel, and agree the success criteria that trigger the 2027 panel phase.

Next move — Hysteron pilot signed Jul 2026.

Josue

LIVE REVENUE

ALS Life Sciences · HH's primary diagnostics delivery partner

The key contact for reactivating ALS, HH's primary diagnostics delivery partner, with a £300k+ reactivation deck already on the table. Momentum is fresh: Sam has begun the reintroduction directly, sharing an intro email, which Mark is following up to test what reengagement opportunity exists.

WHAT WE WANT

To reactivate the ALS partnership on the £300k+ reactivation deck, closing the ISO 17025/15189 and wet-lab capability gap, and to convert a warm CEO-level introduction into a scoped, signed engagement.

WHAT WE ARE ASKING

A reengagement conversation off the back of Sam's introduction: where ALS sees the partnership today, what would move the reactivation deck forward, and the scope and timeline to a signature.

Next move — follow up Sam's introduction email today (1 Jun 2026); scope the reengagement, sign targeted Q4 2026.

ThakaaMed

IN-REGION PARTNER

UAE / Saudi · in-region delivery and regulatory access

The gateway to the whole Gulf axis: the in-region partner that holds approvals and provides regulatory cover for a UAE camel-analytical pilot and a Saudi NUPCO-scale JV. Without it, the largest lines in the forecast cannot localise.

WHAT WE WANT

A delivery and access MoU that lets HH stand up an in-region pilot and satisfy the 40% localisation requirement for Saudi framework work.

WHAT WE ARE ASKING THEM

To agree the in-region delivery MoU, confirm the regulatory pathway, and name the local JV structure for the Saudi entry.

Next move — in-region delivery MoU agreed Aug 2026.

Al Maktoum Family Office

CAPITAL + REVENUE

UAE · Camel Science programme

A dual opportunity: a camel-health analytical services contract and a Gulf family-office equity ticket, with a camel-IP licence behind both. The capital and the in-region credibility that the Saudi push depends on.

WHAT WE WANT

The analytical-requirements scope agreed and brought forward from Dec to Sep, opening the services contract, the equity conversation and the camel-IP licence in sequence.

WHAT WE ARE ASKING THEM

To confirm the analytical requirements and timeline, and to indicate appetite for an equity ticket and a technology-licence-plus-royalty structure.

Next move — analytical scope brought forward to Sep 2026.

5. The timing push: lead access, investment, introductions

Converting breadth into signed work needs dates against the levers, not open-ended intent. Proposed targets:

BY WHEN	LEVER AND ACTION	OWNER
18 Jun 2026	Brown Rudnick Summer Party attended on behalf of HH; Philippe reintroduces Mark to Neil (Tech Partner). Reactivate the referral channel that previously produced a £300k medical-device contract.	Mark (attend) / Philippe (intro)
Jun 2026	Andrew Roddam partner-and-advisor plan agreed and signed.	BridgePoint + HH
25 Jun 2026	Connect/reconnect call with several of the HH team and Dace Dimza-Jones (Dealmaker, Office for Investment / Global Entrepreneur Programme). Scope government investment support, inward-investment facilitation and Dealmaker-network introductions.	HH team + Mark

Jul 2026	Hysteron pilot signed. Garry Walsh Gulf-pharma and Eurofins (Etienne Roux) intro calls held. First Andrew Roddam introductions live.	HH (sign) / BridgePoint (intros)
Aug 2026	ThakaaMed in-region delivery MoU agreed, the gateway to UAE and Saudi. Sara Macauley workshop converted to two qualified introductions.	BridgePoint + HH
Sep 2026	Bring the Al Maktoum / Camel Science analytical scope forward from Dec; John Moore first three leads opened.	BridgePoint
Q4 2026	Kate Ireland investment term sheet. ALS Life Sciences reactivation signed. UAE camel-analytical pilot underway.	HH (close) / BridgePoint
Q1 2027	Saudi entry route mapped with a named local JV partner; first NUPCO-eligible scope defined.	BridgePoint + HH

Forecast snapshot

£745k

weighted services pipeline (~18 months)

£3.0m

unweighted services if each converts

£8m–15m+

strategic optionality (investment, licence, acquisition)

PART TWO

Value delivered against contract

The evidence base behind the forecast: what HH had on 8 April, what it has now, and how each contracted workstream and clause has been met. This is the build that produced the pipeline quantified above.

What HH had, and what it has now

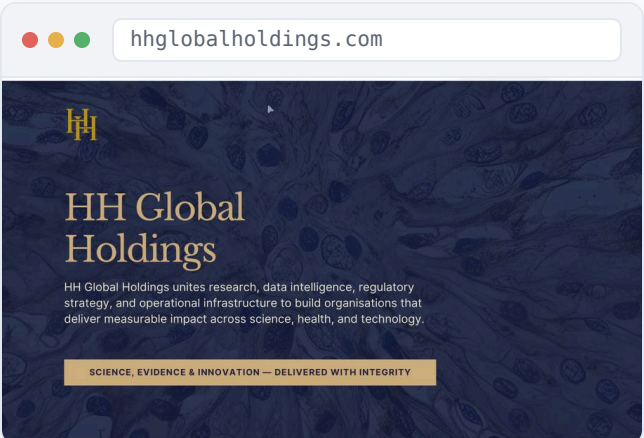

HH was not starting from nothing. There was a website and a LinkedIn company page in place on 8 April. The value BridgePoint has added is not the existence of a presence, it is the **clarity of the message** and the **activity** around it. The table below is deliberately honest about the starting point so the distinction is unambiguous.

WHAT HH HAD ON 8 APRIL

WHAT HH HAS NOW

Message	Three different self-descriptions across the site, the same company described several ways. No single proposition a reader could repeat back.	One sharp proposition: an evidence-driven translational diagnostics platform (v3.0), signed off by Sam on 29 May and carried consistently across every piece of collateral.
Website	A site existed, but roughly 40 per cent of the body copy was repeated, the company number was a placeholder, case studies stated activity with no outcomes, and there was no sign of recent activity. Static and undated.	Rebuilt and live at hhglobalholdings.com: de-duplicated, legible, proof-led, with the product and IP portfolio foregrounded. Now drawing the target ecosystem organically (panel below).
LinkedIn	A company page existed but was dormant, no posting rhythm, no activity, the page was not working as a channel.	Activated and posting, with launch posts at 5.3 to 14.5 per cent engagement against a platform norm of about 2 per cent, and the right audience now finding the page.
Pipeline	No named, tracked commercial pipeline.	16+ named engagements opened and protected across six territories (table below).

BEFORE · 10 APRIL 2026

AFTER · LIVE NOW

HH's own homepage, the same domain throughout: a generic holding-company line in April, a sharp translational-science proposition now. The change is clarity and activity, not the existence of a site.

Delivery against the four contracted workstreams

WORKSTREAM (AGREEMENT, SECTION 1)	DELIVERED	STATUS
Go-to-Market Strategy	GTM action plan, customer archetypes and personas, prioritised outreach programme, phase 1 prospecting campaign.	Delivered

Ecosystem Presence & Enhancement	Existing website rebuilt and relaunched (hhglobalholdings.com), with the message de-duplicated and a clear proposition put in its place. Dormant LinkedIn company page activated and the team presence surfaced and linked. Launch posts at 5.3 to 14.5 per cent engagement (platform norm ~2 per cent). Inbound audience drawn from the target ecosystem (see panel below).	Delivered
Partnerships & Collaborations	A named pipeline of 16+ engagements opened and progressing (table below), spanning diagnostics, biotech, family office, product and IP development, preventive materials and construction, and international market entry. Inbound interest generated through the new presence.	Active
Current Offering Expansion	Repositioning to evidence-driven translational diagnostics (Business Plan v3.0), digital asset valuation, contract landscape and commercialisation pathways, review of the existing contractual position.	Delivered

Contract alignment, clause by clause

So that the agreement can be opened alongside this note and every line checked, the table below maps each item the contract specifies to the work delivered against it.

PHASE 1 — DISCOVERY (SECTION 1)

CONTRACT SPECIFIES THE DISCOVERY DAY WILL MAP	DELIVERED	
Current capabilities, active projects, and R&D pipeline	Discovery Day held on site; capabilities and R&D pipeline captured in the Discovery Report and 90-day execution plan.	✓
Existing revenue streams, retainer arrangements, and client relationships	Mapped in the contract-landscape and commercialisation-pathways analysis.	✓
IP portfolio status (patents, patent-pending, licensing potential)	Digital asset valuation and IP review, including the patent and patent-pending estate and freedom-to-operate position.	✓
University and institutional partnerships (including KTP)	Academic and institutional footprint captured in the ecosystem map; live academic interest now visible in page analytics.	✓
Target markets, customer archetypes, and ideal engagement models	Customer archetypes and personas developed and signed into the GTM action plan.	✓
Commercial vision, growth ambitions, and resource constraints	Captured in the business plan (v1.2 through v3.0) and the no-dilution / capital-allocation discipline.	✓

Discovery Report within 10 working days

Discovery Report and 90-day plan produced and issued.

PHASE 2 — WORKSTREAMS (SECTION 1)

CONTRACT WORKSTREAM AND SCOPE	DELIVERED	
Go-to-Market Strategy: archetype and persona mapping, market segmentation, value-proposition refinement, prioritised outreach, high-value sectors.	GTM action plan v1 to v2, personas, segmentation, refined translational proposition, and a phase-1 outreach campaign of 120 named buyers.	
Ecosystem Presence & Enhancement: website strategy and wireframing, LinkedIn optimisation for key personnel, positioning in industry and academic ecosystems.	Existing website rebuilt and relaunched (hhglobalholdings.com) with a clear message; dormant company LinkedIn page activated and personnel profiles optimised; academic and diagnostics ecosystem now engaging organically.	
Partnerships & Collaborations: identification, evaluation and facilitation of partnerships, JVs, licensing frameworks, international market entry, leveraging the Consultant network in life sciences, AI, healthcare and deep tech.	16+ named engagements across six territories, including international entry (UAE, Saudi, US, Australia), product and IP development routes, a preventive-materials construction vector, and inbound interest. Drawn from the Consultant network.	
Current Offering Expansion: portfolio and R&D analysis, commercialisation pathways, new revenue models (licensing, retainer, IP monetisation), adjacent markets.	Repositioning to translational diagnostics (v3.0), digital asset valuation, commercialisation pathways and revenue-model design, adjacent-market identification.	

DEFINED SERVICES (SECTION 3)

SERVICE LISTED IN THE CONTRACT	DELIVERED	
Discovery sessions and stakeholder interviews	Discovery Day and stakeholder interviews completed.	
Strategic analysis and report preparation	Business plan series, contract-landscape, valuation and advisory reports.	
Website strategy, wireframing, and digital presence advisory	hhglobalholdings.com designed, built and live.	
LinkedIn and professional profile optimisation	Dormant company page activated, personnel profiles surfaced and optimised, posting started.	
Customer archetype and persona development	Personas developed and embedded in the GTM plan.	

Ecosystem mapping and partnership identification	Ecosystem map produced; partnership pipeline built and maintained.	✓
GTM strategy development and outreach programme design	GTM v2 and phase-1 prospecting programme designed and launched.	✓
IP and licensing strategy advisory	IP valuation, freedom-to-operate review and licensing-route scoping across the product and IP portfolio.	✓
Network introductions and facilitated conversations	Introductions facilitated to Sara Macauley, Andrew Roddam, Al Maktoum Family Office, ThakaaMed and John Moore, among others.	✓
Progress reviews and advisory sessions	Ongoing advisory cadence; this review is part of that rhythm.	✓

Beyond scope: three things that went further

1. We de-risked the forward plan. During the offering work we tested the commercial plan against HH's existing contractual commitments, identified where the forward strategy needed adjusting, and rewrote the affected positioning so the plan stands on clean footing. A full review of the relevant contractual position was provided. Diligence beyond the brief.

2. The presence is already generating inbound. HeartSights found HH through the new website and approached us. The ecosystem work is returning leads in weeks, not quarters.

3. We opened the international corridor. From a standing start, engagements now reach the Gulf (Al Maktoum family office, ThakaaMed as in-region partner), Saudi pharmaceuticals, the US and Australia, aligned to the v3.0 global axis.

The strategic asset: Business Plan v3.0

Beyond the individual workstreams, the engagement has produced a single high-value asset: a rebuilt group business plan that gives HH an investor-ready and partner-ready narrative it did not have before. What the rewrite delivered:

- **A clear identity.** Repositioned HH from a fragmented CRO / consultancy into a *translational science and evidence platform*, taking science from biomarker discovery to validated diagnostics, therapeutics

and regulator-ready evidence, molecule to deployment, with no handoff gaps. This is the language Sam signed off on 29 May.

- **The group structure, brought forward and made legible.** The parent and its integrated companies (Research & Innovation, Data & Evidence Services, Insight) articulated up front, with the historic consulting entity structurally separated from the regulated vehicles.
- **The product and IP portfolio foregrounded.** ArrayDx (patent-pending, trademark submitted) and PatchDx (patent-pending) elevated as the growth story, alongside HH's own ISO-aligned Nottingham laboratories (including an ISO 7 controlled clean room).
- **Company accolades separated from individual credentials**, so the institutional story stands on its own.
- **The commercial case framed:** a serviceable opportunity in the order of £300 to 600M across the priority UK and adjacent-Europe vectors, and a modelled pathway to £5 to 10M run-rate over five years from a £25K+ MRR / nine-engagement base (figures being finalised with HH).
- **Delivered as a fully tracked rewrite** responsive to the 29 May Sam and Tracy feedback: every change visible and reasoned, so the team can see exactly what moved and why.

The engagement pipeline

Every party below was introduced or activated through BridgePoint during the engagement, and sits within the Section 13 protected pipeline. Indicative values and close dates for these engagements are quantified in Part One (the forecast above), and the key people are brought to life in Section 4.

ENGAGEMENT	REGION	STAGE AND NEXT MOVE	STATUS
ACTIVE ENGAGEMENTS			
Hysteron · Verity Fotheringham	UK	Discovery to pilot. Pilot proposal sent, expansion panel scoped, signature targeted Jul 2026.	Active
HeartSights · Jane	UK	Inbound via the new website. Funding need identified, advisory role under discussion.	Progressing
ALS Life Sciences · Josue / Dr Hosway	Europe	Reactivation of primary diagnostics delivery partner. £300K+ reactivation deck back on the table; ISO 17025/15189 and wet-lab gap reaffirmed.	Active
ALS Invitek (Berlin)	EU	Molecular arm. Re-open dialogue on proposal v0.3; Q2 movement targeted.	Progressing
Sara Macauley (Global Scot)	US / Global	Connector engaged, already surfacing leads (Eurofins, Saudi pharmaceuticals and more). Workshop scheduled.	Active
Al Maktoum Family Office · Camel Science	UAE	Analytical requirements scoping; scope agreed targeted Dec 2026.	Progressing
ThakaaMed	UAE / Saudi	Engaged as in-region delivery and access partner.	Progressing

Kate Ireland	UK	Potential investor, both into the product and IP portfolio (ArrayDx, PatchDx and successors) and directly into HH.	Investor
John Moore · CardioNexus	Australia	Ex Global Director of Innovation, Bupa; now leading CardioNexus, Melbourne. Network reach and fast-lead potential.	Progressing
Andrew Roddam	UK / US	Potential lead source through his network. A formal partner and advisor plan is to follow.	Lead source
CONSTRUCTION AND PREVENTIVE MATERIALS (EXPLORATORY)			
OptimaBI	UK	Route into the construction sector. Potential conversations with plaster and in-home construction-product manufacturers on preventive, anti-mould product development, designing mould out at source rather than managing the aftermath. From the BridgePoint network.	Exploratory
TrueLens	UK	Potential engagement in the same preventive-materials vector.	Exploratory
EARLY STAGE AND HELD			
Lohmann	EU	Engaged; early stage, development needed.	Early
Stoma Alert	UK	Brought to the table; early stage, development needed.	Early
Legal sector (RSL / housing)	UK	Leads created, then deliberately held pending resolution of an existing contractual restriction. Re-activates when clear.	Held
SECOND-ORDER LEADS (VIA SARA AND NETWORK)			
Garry Walsh · Eurofins (Etienne Roux) · mould-sector entrant	Global	Gulf pharma access, Eurofins partner/acquirer conversation, and a mould-sector company entering the UK. Opening now.	Opening

Snapshot

8 weeks

from a static presence to a clear, active, market-facing one

16+

named engagements opened and protected

6

territories in play: UK, Europe, UAE, Saudi, US, Australia

The LinkedIn presence, brought to life

HH had a company page on 8 April, but it was dormant, no posting, no activity, not functioning as a channel. During the engagement it was rebuilt, the team profiles surfaced and linked, and a posting rhythm started. Two signals matter more than raw reach at this stage: **engagement quality** and **who is finding the page**.

7.6%

page engagement rate, trailing 30 days (platform norm ~2%)

14.5%

engagement on the website-live post

+18.8%

unique visitors, period on period

The audience finding HH is the target market. Page visitors during the period include EPSRC, Springer Nature, the Medical Technologies Innovation Facility (MTIF), Dedalus, McLaren Automotive, medical and diagnostic laboratory professionals, and academics from De Montfort, Nottingham Trent, York St John, Queen Mary and the Royal Agricultural University. By job function, visitors are led by business development (38.9%), engineering (11.1%), programme and project management (11.1%) and research (8.3%). From a standing start, the diagnostics and research ecosystem is discovering HH organically.

Posting cadence was concentrated around the April launch and tapered through May while effort moved to business development and the v3.0 plan. Re-establishing a steady content rhythm is a defined Phase 2 action (Part One).

Recommendation: continue the engagement beyond the initial term (concludes 8 July 2026) to carry this momentum into revenue. The build phase is done; the conversion phase, driven by the named asks in Part One, is where the value is realised.

#HhGlobal #Forecast #ValueDelivered #Renewal Part One figures are market-comparable planning ranges, not commitments or guarantees; sources held on file and available on request. Prepared by BridgePoint AI for HH Research & Innovation Ltd · Confidential, do not disseminate.
